RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 20 pages. Original publisher: Hampton, Va. : National Aeronautics and Space Administration, Langley Research Center, 1990 OCLC Number: (OCoLC)67835988 Excerpt: . . . 4 Conclusion The preprocessed doacross loop is a type of doacross loop that allows us to schedule loop iterations onto processors without prior knowledge of inter-iteration dependencies. We have demonstrated that such a loop structure can allow parallelization of loops that would not otherwise be easily parallelized. The overheads required to parallelize loops in this manner can be substantial but should not prevent us from achieving overall performance gains in many cases. 5 Appendix: Definition of Test Triangular Systems The the triangular systems referred to in Section 3. 2 were derived from the following partial differential equation discretizations: SPE2 This problem arises from the thermal simulation of a steam injection processes. The grid is 6x6x5 with 6 unknowns per grid point, this yields a system with 1080 equations. The matrix is a block seven point operator with 6x6 blocks. SPE5 This problem arises from a fully-implicit, simultaneous solution simulation of a black oil model. It is a block seven point operator on a 16x23x3 grid with 3x3 blocks yielding 3312 equations. 5-PT The problem is a five point central difference discretization on a 63 x 63 grid; this yields a system with 3969 equations. 7-PT The problem is a seven point central difference discretization on a 20 x 20 x 20 grid; this yields a system with 8000 equations. 9-PT The problem is a nine point box scheme discretization on a 63 x 63 grid; this yields a system with 3969 equations.
